PROFESSIONAL SUMMARY

Software Engineer with 2 years of experience building backend systems, microservices, and API-driven applications using Java, Spring Boot, Rust, and TypeScript. Experienced in designing distributed systems, scalable backend services, and data models for gaming platforms, with hands-on exposure to RESTful APIs, GraphQL, gRPC, caching, and system design. Capable of delivering end-to-end full-stack solutions while specializing in backend engineering, platform development, and production-grade software.

TECHNICAL SKILLS

Languages: Java, Rust, TypeScript, JavaScript, SQL

Backend Technologies: Spring Framework, Spring Boot, Spring MVC, Spring Data JPA, NestJS, Node.js

API & Communication: RESTful APIs, GraphQL, gRPC

Frontend: React.js, Next.js, Angular

Databases: PostgreSQL, MySQL, DynamoDB, Redis, MongoDB, NeonDB

Architecture & Engineering: Microservices, Distributed Systems, Event-Driven Architecture, API Design, Backend Services, Database Design, Data Modeling, RBAC, API Gateway, Caching, Concurrency Control, Scalability, System Design

Tools & Technologies: Git, GitHub, Maven, Docker, Jenkins, ArgoCD, Cursor, Redis Streams, GraphQL Gateway

PROFESSIONAL EXPERIENCE

Aretedge Innovations Pvt. Ltd.

Associate Software Engineer

Aug 2024 – May 2026

Hyderabad, India (On-site)

- Owned the end-to-end design and implementation of the Challenge Module, delivering backend workflows, business logic, API orchestration, and database design.
- Architected leaderboard allocation and ranking systems supporting score computation, rank updates, and concurrency-aware aggregation workflows.
- Delivered backend services supporting tournament management, matchmaking, rewards, and core gaming platform functionality serving more than 20K active users.
- Engineered scalable microservices using Java, Spring Boot, Rust, and NestJS following service-oriented architecture principles for modular deployment and maintainability.
- Designed and integrated RESTful APIs, GraphQL endpoints, and gRPC services to enable efficient communication across distributed services.
- Modeled relational schemas in PostgreSQL while optimizing DynamoDB access patterns for transactional and read-intensive workloads.
- Enhanced service responsiveness through Redis caching, API Gateway integration, and request rate-limiting strategies.
- Built event-driven reward processing workflows with concurrency-aware execution to improve consistency and reliability across distributed services.
- Monitored production services, analyzed application logs, investigated backend issues, and resolved production defects while supporting release activities using Docker, Jenkins, and ArgoCD.
- Collaborated with product managers, QA engineers, and cross-functional teams in Agile Scrum environments through sprint planning, code reviews, defect resolution, and iterative production releases.

INTERNSHIP EXPERIENCE

Aspire Systems

Software Engineering Intern

Jan 2023 – Mar 2023

Chennai, India (Remote)

- Developed enterprise application features using Angular, Java, Node.js, and MySQL.
- Integrated Angular frontends with Java backend services and RESTful APIs following enterprise development standards.
- Enhanced application functionality through debugging, testing, issue resolution, and UI improvements.
- Participated in Agile development activities including requirement discussions, peer code reviews, and sprint delivery.

PROFESSIONAL TRAINING

Aspire Systems

Software Engineer Trainee

Sep 2022 – Jun 2024

Chennai, India (Remote)

- Completed structured enterprise training in Java, Spring Boot, Angular, Node.js, MySQL, object-oriented programming, software engineering principles, SDLC, and application architecture.
- Built full-stack applications and completed project-based assignments following enterprise coding standards and development best practices.
- Strengthened practical knowledge of REST APIs, database design, debugging, testing, version control, and collaborative software development.

PROJECTS

Personal Finance Tracker | *Next.js, TypeScript, PostgreSQL, NeonDB, Zustand*

- Engineered a full-stack expense management application with secure authentication, real-time financial tracking, and PostgreSQL-backed data persistence using NeonDB.
- Designed transaction management, hierarchical categorization, automation rules, analytical dashboards, and CSV import capabilities for comprehensive personal finance reporting.
- Built responsive API-driven workflows with Next.js App Router, Row-Level Security (RLS), and real-time synchronization to deliver secure and scalable expense management.

Live Demo: mdk-expense.vercel.app | **GitHub:** github.com/mdkdinesh2503/finance-tracker

Student Management System | *Angular, Java, Node.js, MySQL*

- Developed an academic management platform supporting attendance, examinations, fee management, and student administration across student, teacher, and administrator portals.
- Implemented Role-Based Access Control (RBAC) and relational database design to secure user access and streamline academic workflows.
- Progressively evolved the application from a frontend prototype into Angular and Java implementations, strengthening backend architecture and modular application design.

Live Demo: mdkdinesh2503.github.io/SMS-V1 | **GitHub (Angular):** github.com/mdkdinesh2503/SMS-V2 |

GitHub (Java): github.com/mdkdinesh2503/SMS-V3

E-Commerce System | *Java, Spring Boot, Spring Data JPA, MySQL, JavaScript*

- Designed a modular e-commerce platform following layered architecture principles with Spring Boot to support extensible backend services.
- Implemented core product management, shopping cart, and order processing modules while establishing a scalable service structure using Spring Data JPA.
- Progressively evolved the application from a static frontend prototype into a backend-driven system with persistent data management and RESTful services.

Live Demo: mdkdinesh2503.github.io/Ecom-V1 | **GitHub (Spring Boot):** github.com/mdkdinesh2503/Ecom-V2

Travel Agency Platform | *Angular, Node.js, MongoDB*

- Built the architectural foundation for a travel management platform using the MEAN stack, emphasizing modular application structure and maintainability.
- Developed secure authentication workflows and foundational backend services for user and travel data management.
- Transitioned the project from a frontend prototype into a dynamic Angular and MongoDB implementation supporting future booking workflow expansion.

EDUCATION

K.S.R College of Engineering

Bachelor of Engineering (B.E) in Computer Science and Engineering

Namakkal, Tamil Nadu, India

2019 – 2023

CERTIFICATIONS

Rust Programming Essentials – Edureka (2026) | **AWS DynamoDB Fundamentals** – Meta (2025)

Advanced React – Whizlabs (2025) | **Google Prompting Essentials** – Google (2025)
