

Dear Recruiter,

I am excited to apply for this opportunity at your organization. With over 2 years of experience building scalable backend systems, microservices, and API-driven applications, I am confident in my ability to contribute effectively to your engineering team.

Throughout my career, I have worked extensively with Java, Spring Boot, Node.js, NestJS, TypeScript, PostgreSQL, DynamoDB, Redis, GraphQL, and gRPC. I have designed and developed production-grade systems including tournament platforms, matchmaking systems, challenge services, leaderboard computation engines, reward systems, and distributed microservice architectures. My experience spans backend development, database design, API development, caching strategies, system integration, and performance optimization.

In addition to backend engineering, I have experience working with React, Next.js, and Angular, enabling me to collaborate effectively across the full stack when required. I enjoy solving complex engineering problems, designing maintainable systems, and building reliable, high-performance applications that deliver business value.

I am currently an Immediate Joiner and am open to opportunities in Bangalore, Chennai, Hyderabad, and Coimbatore, including Hybrid, Onsite, and Remote work arrangements.

I would welcome the opportunity to discuss how my technical expertise, problem-solving abilities, and passion for engineering can contribute to your team and organizational goals. Thank you for your time and consideration. I look forward to hearing from you.

Sincerely,
Dinesh
